

# **Ecological Conditions Update**

Deborah L. Drum

Deputy Director, Restoration Sciences Department Everglades Restoration and Capital Projects

# Kissimmee Basin

- Above-normal rainfall in January, but overall, dry conditions persist
- January Snail Kite survey:
  - 11 nests are active on Lake Toho;
     2 on East Lake Toho
  - A total of ~180 Kites were sighted
- Lower Basin:
  - Drying pools continue on the floodplain, with lower use by wading birds than in previous years
  - Low water levels are providing optimum shorebird habitat in the Phase I river channel

**February 7, 2011 Conditions** 

## Stormwater Treatment Areas

As of February 1<sup>st</sup>, 2011, ~ 8,000 ac-ft of supplemental water has been delivered to the STAs from Lake Okeechobee

- Current water levels range from below ground to above target stage
- Dry-out conditions:
  - STA-2 Cell 4 (Comp B Construction)
  - STA-5 Cells 1A, 2A, 3A and 3B
  - STA-6
- STA-2 Cell 1 recently rehydrated due to rainfall driven water deliveries
- No additional supplemental water deliveries occurred after January 9<sup>th</sup>, 2010
- Discharges from STA-1E, STA-1W, STA-2 and STA-3/4 occurred as a result of January rain events

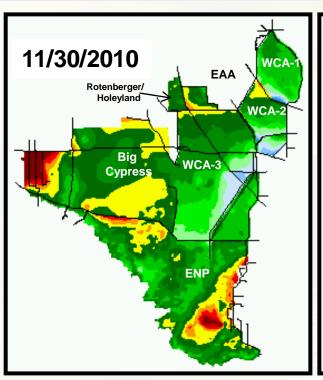

# Stormwater Treatment Areas (Continued)

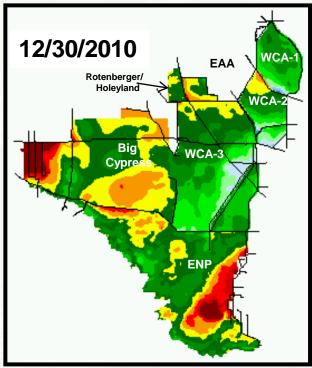

### Wildlife Issues

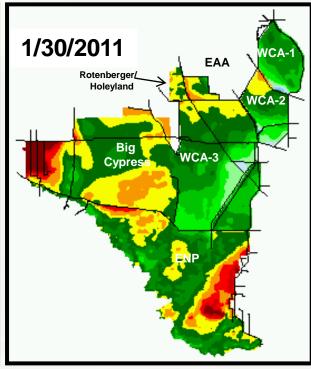

- In 2010, Snail Kite nesting affected STA-5 operation
- 21 Snail Kites were spotted in STA-5
- 2011 STA-5 Snail KitePlan final draft
- Biological Opinion for STA-5 – under revision

# Greater Everglades Water Depth Monthly Snapshots

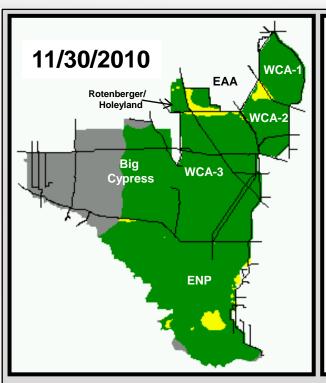

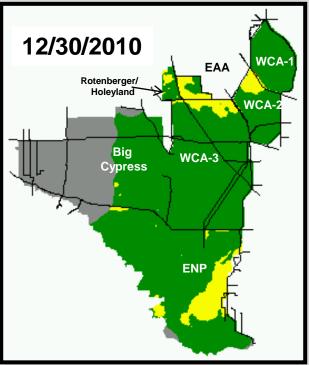

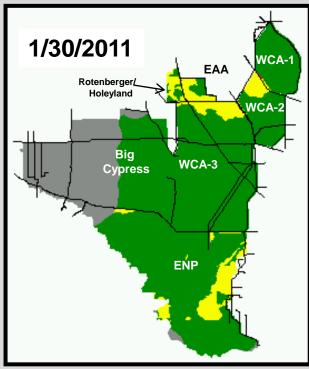

### **Water Depth (feet)**

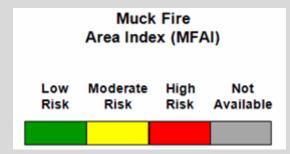

# **Greater Everglades Fire Risk**

## Wading Bird Update

- Large flocks of wading birds, including Wood Storks, Roseate Spoonbills, White Ibises, and Great Egrets are feeding in the **Conservation Areas**
- Roseate Spoonbill nesting activities are low in Florida Bay

Wood Stork

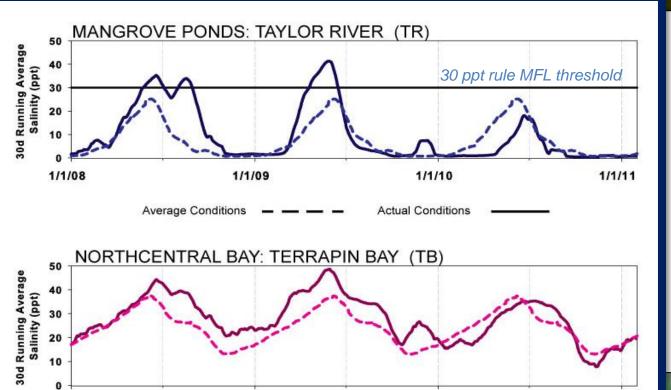

Great Egret

### Tracking Salinity in Florida Bay

1/1/10

1/1/11

1/1/09

✓ Recent rainfall has improved conditions across southern Everglades and reduced chance for hypersalinity in Florida Bay

Goal: Protect seagrass habitat to prevent significant harm to ecosystem

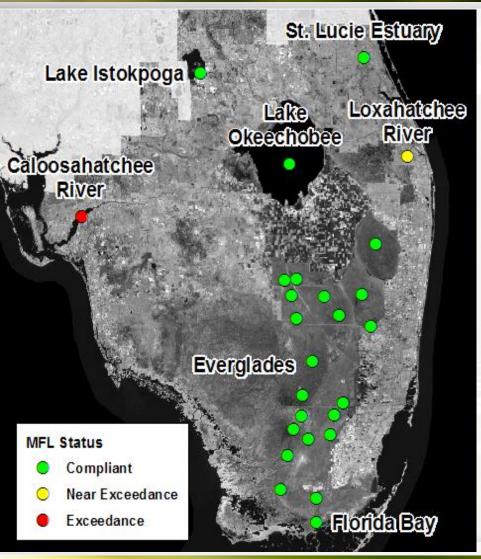

1/1/08

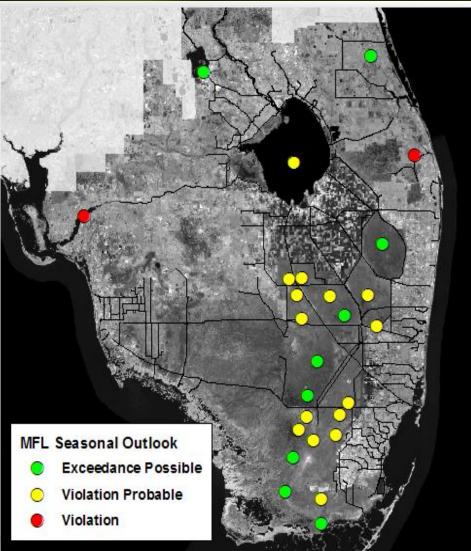

### MFL Status and Seasonal Outlook

	Date of Last			Seasonal Outlook
	Exceedance	Status	30-day Outlook	(May 2011)
Lake Istokpoga	None	Compliant	Compliant	Exceedance Possible
St. Lucie Estuary	None	Compliant	Compliant	Exceedance Possible
Lake Okeechobee	8/3/2008	Compliant	Compliant	Violation Probable
Caloosahatchee River	Present Exceedance	Exceedance	Exceedance	Violation
